(All Members) | Data shifting from online to cold server

It's standard process that after 6 month data getting parked from the live server to cold storage however please let we know whether for the any specific client we can do the activity on quarterly basis.

Hello sir,

As discussed with Shimbi team, we can add condition to take backup of cases quarterly for specific client.

Hi Manas

We recommend monthly backup as all the reports to ensure minimum data loss if any issue occur.

Can you please share the date by which we can give an application to Ops to use.

Hello sir,

Today i have discussed with Sir Kailash regarding , issue of removal of image from older pdf more than 6 months, as the image are moved to cold storage.

In this case we can embed the image code directly in the pdf instead of adding any image link. This will allow you to see images in pdf even after they are moved to cold storage. But the links on the image after 6 months won't work as the actual images are not on server.

In that case if you wish to download the images again via pdf link you have to request yrhost again to restore them from cold storage for that day.

Note : This process may increase the pdf file size as the images code will be embedded in pdf. We have to check this as how much time it takes, since bulk send to client is done it can also result in script execution timeout.

Hi Manas

Please confirm on the below points

- Please confirm whether we can give embed option only for the one specific client - i.e Siemens
- Whether client will able to get PDF report from June 2020 onwards with images.
- How much time it will take if we have to embed image code directly

Please confirm at the earliest

Hello sir,

Point 1 : Please confirm whether we can give embed option only for the one specific client - i.e Siemens
Reply : Yes we can.

Point 2: Whether client will able to get PDF report from June 2020 onwards with images.
Reply : No, images will be missing , please restore images first then download the pdf to show the image for that day. After the image code embedding development , once the images are restored and pdf is re-downplayed again then we can have the images in pdf permanently.

Point 3: How much time it will take if we have to embed image code directly
Reply : 10 days, as we have to test it first and check also how to achieve the embedding of image in pdf process.

Hi Bhavana

I have gone through the reply .

Reference to your reply on point # 2, if images will be visible only for the day then it will not be useful

Please check and get the image embedding activity for the said client before next weekend so that we can share the report to client.

Hello sir,

Hello sir, for point 2, if images are not present in live server, then we won't be able to add the image code in pdf, as such you need to make request to yrhost case wise for image restore on the day you will generate those old pdfs again.

Once development is done images added in pdf will be permanent but we need the image on server at least.

Hi Bhavana

I am aware post images restore on live server then only it will reflect in the PDF however if as per the post crons runining in the midnight if images remove the from the PDF then it will not be helpful to us to fulfill the client requirement.

Please check and get the image embedded code development completed till next weekend. which will help us to close client query.

Hello sir,

Will have to check that, once development starts, also this will slow down the send to client process and make pdf size larger as the entire image code will be added in pdf.

Also please let us know what is the client id and name for which this change is required.
Development once done will be updated in demo server to test.
Any additional task in between will increase development time.
