Dear Ganesh

We will start software stack updates to the latest possible PHP and MySQL with Codeigniter 3.1.13. This is a stop-gap. In the next 18 to 24 months, we must think of CI 4.2 + or Laravel.

For now, Updating PHP and MySQL Versions and cleaning and updating code will take 90 to 120 days for Manas dedicatedly to this work, which means he will not support operations actively.

Work can only start **from February 2023**.

No separate cost.
(If we use a separate engineer, then the cost will be 50 to 60 thousand, depending on what sort of complication we face.)

Next, we must rewrite the mobile app. Instead of using Android, we should consider the Progressive Web App (PWA), which is platform-independent, easy to maintain, secure, and can be updated by web developers instead of mobile developers.

This is immediately after the above updates.
It may take 120 to 150 days, and again the cost will be
No separate cost.
(If we use a separate engineer, then the cost will be 1 lakh to 1.5 lakhs.)

But STRICT RULE is Manas will not be part of supporting operations or developing ongoing small modules. He will simply guide the current engineer.

Regards,
Siddharth
