Selection based next questions

Hi,

The operations tea has requested whether we can have an option of a particular set of question, which will be visible only after a specific question is answered 'Yes" or 'No".

For eg:
Refer to main (global) template of 'Cheque collection'
If the response to question "appointment" fixed is 'Yes' only then the field "appointment date' and 'appointment time' should be editable. and the fields 'Call back required', 'Appointment refused' should not be editable.
And if the response is 'No' then the fields according to the selection should be editable.

Please provide your inputs on feasibility and implementation.

yes, it is possible.
But where you want to manage this, from template design or is it a new module.
If we manage it from template design then need to do changes in 'template design' and 'case form'(add/edit case,verification,updation) modules.

This will be required to be managed from Template design.

From the response I understand this would require major development in the system.

Shall discuss internally and comment further.
