Dipika Yedge | Archive for table case history

Hello as discussed with ramki separate thread is to be created for this task,

Current Process to archive cases :
We have two menus **1) Archive Manually 2) Archive**

1) Archive Manually
In this menu we move cases from main table to backup table, but records remains in table case history.

2) Archive
In this menu we move cases from backup table to main table.

So new requirement and process is as follows :

1) Archive Manually
Cases from table cases and records related to that cases in table case history(along with one more entry i.e Archive manually by, original primary key id for table case history will be reserved in backup table) will be moved to backup database.

2) Archive
Cases from backup table cases and records related to that cases in backup table case history(original primary key id for table case history will be reserved) will be moved to main database.

Ma'am let me know the above requirements are valid and when we can work on it.
