Ramakrishnan V | Clients Service ID to be configured in the SMS

HI Manas

As discussed on the call, please make note that currently all the SMS which we are sending are going with Company Brand name as PAMFin, whereas in case of one of our client they want recipient to receive the message with their Band name. For which client is ready to share their template id and login credentials.

Please review the requirement and confirm whether it can be done and how much time will required if in case of we want to design the same.

Hello sir,

Is the SMS change for both modules ? :
1) Digital Verification (Assign case to applicant) - Here sms template is fixed in code
2) Auto SMS/Email

It will take around 4 days to complete for both modules, will fix the new sms api in code as present for PAMAC sms api details.

Also found sms gupshup service is used in webservice for Mobile app. Is any changes there ?

Hi Mana

Digital vertificaiton and this client sms requirement is different, there is no need of any email.

Please discuss for the further clarity.

Hello sir,

Email is part of Auto Sms/Email module, changes will be only on sms api end.
Please confirm priority of task, so that i can start working on it.

Also please provide new sms api details and template to test.

Hello sir,

As discussed on call today below are the requirements for new client sms:

1) SMS gateway Api documentation. (For api **request** and **response** process and format)
2) SMS gateway Api **URL** (demo and live both if any)
3) SMS gateway Api access details (i.e **username** , password or **api key** if any)

Note: Will fist prepare a test script to check when above details are received with the excel file shared for sms template body.

Date & Time : 25-07-2023 02:29:PM
Hello sir,

I have checked the pdf file, the actual api URL and template related details are not mentioned in the pdf.

Although i have understood the request and response process for api, but need a final sample to test first with dummy message for sms.

Please provide necessary details to check:
i) Actual api url
ii) API-Access Key
iii) Sender ID
iv) Plain text message (i.e sms body)
v) template_id (optional)

Also there is mention of IP address restriction in the pdf for api call are we using this service ?

It will take around 2 days for development once final api is tested.
i) Client id will be fixed and during send sms will check if client id matches the fixed client id in code and then call new api and handle response and update tables.

Hi,

please find below revert shared by operations team.
kindly confirm if this suffice the requirement, else we will ask ops to confirm so that we can plan implementation.

URL: www.karix.solutions

Uname: **ZAGGLE**

Key: login to the UI->click on API KEYS under Power API module->click on API Keys>> click on create keys>> Give Key name and description and click on **save** button to generate your key. You will find that key under click on "**eye**" symbol to view the key and use the same key in the above API(Key is confidential and do not share it with any unauthorized users to spam your account).

SMS API:https://japi.instaalerts.zone/httpapi/QueryStringReceiver?
ver=1.0&key=&encrpt=0&dest=91xxxxxxxxxx&send=senderID&dlt_entity_id=&text=message content

Hi manas

Is there a possibility of giving some tentative date by which time D282/283/284/285 will get closed - so that a priority to this item may also be possible to be given.

Hello sir,

Sorry for the late reply, as was working on D282.

D282 2nd phase changes will take around 30 working days as already emailed. Please confirm changes already done to go live, once checked by mam Dipika.

D283 is for discussion opened by Sir Siddharth in response to PAMAC email and the task are continued in

D282.

D284 is to be done from PAMAC end for finding fields and removing them from tbl_cases which are not necessary and alternative fields can be used in its place.

D285 is again discussion opened from PAMAC for slow issue discussion.
